

Charge-auth Form with Payment Form SDKs

Initialization with <code>@solidgate/client-sdk-loader</code>	1
Initialization with <code>@solidgate/react-sdk</code>	2
Initialization with <code>@solidgate/vue-sdk</code>	3

Initialization with `@solidgate/client-sdk-loader`

If you're using the `@solidgate/client-sdk-loader` package in your app and want to use the charge-auth version of the payment form, you can provide the corresponding CDN URL to the `SdkLoader.load(sdkUrl?: string)` method:

```
TypeScript
import { SdkLoader } from "@solidgate/client-sdk-loader"

/**
 * Configuration, as it described here
 *
 * https://docs.solidgate.com/payments/integrate/payment-form/create-your-payment-form/
 */
const data = {
  merchantData: {
    merchant: '<<--YOUR MERCHANT ID-->>',
    signature: '<<--YOUR SIGNATURE OF THE REQUEST-->>',
    paymentIntent: '<<--YOUR PAYMENT INTENT-->>'
  }
}

async function init() {
  // call the load method with the charge-auth form CDN URL
  const sdk = await SdkLoader.load("https://cdn.charge-auth.com/js/form.js")
  const form = sdk.init(data)
}
```

Initialization with **@solidgate/react-sdk**

If you are using **@solidgate/react-sdk** to render the Payment Form within your React app, you can call the **SdkLoader.load(sdkUrl?: string)** method with corresponding CDN URL before declaring the component:

TypeScript

```
import Payment, { SdkLoader } from '@solidgate/react-sdk';
SdkLoader.load("https://cdn.charge-auth.com/js/form.js");

function App () {
  const merchantData = {
    merchant: '<--YOUR MERCHANT ID-->',
    signature: '<--YOUR SIGNATURE OF THE REQUEST-->',
    paymentIntent: '<--YOUR PAYMENT INTENT-->'
  };

  return (
    <>
      <Payment
        merchantData={merchantData}
      />
    </>
  );
}

export default App
```

Initialization with @solidgate/vue-sdk

If you are using @solidgate/vue-sdk to render the Payment Form within your Vue app, you can call the `SdkLoader.load(sdkUrl?: string)` method with corresponding CDN URL before defining the Vue async component:

TypeScript

```
<script setup lang="ts">
import { InitConfig, SdkLoader } from "@solidgate/vue-sdk";
import { defineAsyncComponent } from 'vue'

SdkLoader.load("https://cdn.charge-auth.com/js/form.js")

const Payment = defineAsyncComponent(() => import('@solidgate/vue-sdk'))

const merchantData: InitConfig["merchantData"] = {
  merchant: '<!--YOUR MERCHANT ID-->',
  signature: '<!--YOUR SIGNATURE OF THE REQUEST-->',
  paymentIntent: '<!--YOUR PAYMENT INTENT-->'
}

</script>

<template>
  <Payment
    :merchant-data="merchantData"
  />
</template>
```
